Practice problems on functions

For any of the following programs you can reuse the code you wrote previously!

1. Write a function that finds an absolute value of a variable passed to it.

2. Write a function that finds a minimum of two variables passed to it.

3. Write a function that finds an average value of two variables passed to it.

4. Write a program that has a function that finds if a variable passed to it is even or not.

5. Write a function that checks if a variable is divisible by 5.

6. Write a function that checks if a variable is divisible by any number (passed to it).
