# Output Commands in C++

- Getting the computer to type on your screen
- Model instruction:

```
cout << [statement];
```

- The ; is like a period in that it ends a C++ instruction

# Examples of output instructions

```
cout << "Hello" ;
```

```
cout << 5;
```

```
cout << "5" ;
```

# Example program to say “Hello”

```
#include<iostream>
using namespace std;

int main() {
    cout << “Hello!” ;
    return 0;
}
```
